## Next Generation Emissions Testing Equipment for Pennsylvania

### Update to the Next Generation with EASE

EASE Diagnostics, a PA company, has been a PA OBD testing equipment provider since the program started 13 years ago. EASE will be participating in the PennDOT mandated equipment update which will begin soon.

Whether or not you are currently using EASE emissions equipment, we will work with you to keep your costs down when you update your emissions system. We plan to recycle any current system components we can when we upgrade stations to the next generation of certified equipment.

### Service & Components You Can Count On

EASE always uses top-of-the-line components, including a Dell Desktop Computer with Intel processor, Honeywell bar code scanner and Waekon gas cap tester. Maximum system dependability is assured because of the use of the best equipment available.

Many of our customers are still using the same PC and other components they purchased over 10 years ago. We have experienced support representatives across the state to meet your service needs. Most of our reps have been with us since the program started.

### Save Time With Wireless Inspections

PennDOT requires that all next generation emissions systems include a new vehicle interface. EASE designed the VIM-BT to meet their specifications.

The VIM-BT communicates wirelessly via Bluetooth with the PC so you won't have to run a cable between the PC and the vehicle. This time saving wireless feature is included at no additional charge with all of our next generation systems.
